Open Source

fastlane.tools is the easiest way to automate building and releasing your iOS and Android app. Started as a small open source project during college, I grew fastlane to be the number one deployment tool for mobile applications. Only a year in, it got acquired by Twitter. After releasing dozens of new features like fastlane plugins, pre-packaged fastlane and easier on-boarding, fastlane got acquired by Google.

danger

Co-started the open source project danger, a CI-tool to automate PR reviews

TSMessages

A library to show elegant message views on top of the iPhone screen.
